Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies)

Ning Xi, King Lai

Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) Ning Xi, King Lai

Nanophotonics has emerged as a major technology and applications domain, exploiting the interaction of light-emitting and light-sensing nanostructured materials. These devices are lightweight, highly efficient, low on power consumption, and are cost effective to produce. The authors of this book have been involved in pioneering work in manufacturing photonic devices from carbon nanotube (CNT) nanowires and provide a series of practical guidelines for their design and manufacture, using processes such as nano-robotic manipulation and assembly methods. They also introduce the design and operational principles of opto-electrical sensing devices at the nano scale. Thermal annealing and packaging processes are also covered, as key elements in a scalable manufacturing process. Examples of applications of different nanowire based photonic devices are presented. These include applications in the fields of electronics (e.g. FET, CNT Schottky diode) and solar energy.

- Discusses opto-electronic nanomaterials, characterization and properties from an engineering perspective, enabling the commercialization of key emerging technologies
- Provides scalable techniques for nanowire structure growth, manipulation and assembly (i.e. synthesis)
- Explores key application areas such as sensing, electronics and solar energy

From reader reviews:

Brian Andres:

Why don't make it to be your habit? Right now, try to ready your time to do the important work, like looking for your favorite book and reading a reserve. Beside you can solve your problem; you can add your knowledge by the book entitled Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies). Try to make the book Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) as your close friend. It means that it can be your friend when you feel alone and beside regarding course make you smarter than ever. Yeah, it is very fortunate for yourself. The book makes you more confidence because you can know every little thing by the book. So, we need to make new experience and also knowledge with this book.

Lila Dixon:

What do you in relation to book? It is not important together with you? Or just adding material when you want something to explain what your own problem? How about your time? Or are you busy particular person? If you don't have spare time to complete others business, it is make you feel bored faster. And you have free time? What did you do? Every individual has many questions above. They should answer that question since just their can do this. It said that about book. Book is familiar on every person. Yes, it is suitable. Because start from on kindergarten until university need this kind of Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) to read.

Diane Russel:

A lot of people always spent their very own free time to vacation or go to the outside with them household or their friend. Do you know? Many a lot of people spent they will free time just watching TV, as well as playing video games all day long. In order to try to find a new activity that's look different you can read a book. It is really fun to suit your needs. If you enjoy the book that you read you can spent 24 hours a day to reading a e-book. The book Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) it is quite good to read. There are a lot of people that recommended this book. These people were enjoying reading this book. In case you did not have enough space to create this book you can buy the particular e-book. You can more easily to read this book out of your smart phone. The price is not too expensive but this book provides high quality.

Timothy Bullock:

Reading a e-book make you to get more knowledge as a result. You can take knowledge and information from your book. Book is published or printed or highlighted from each source that filled update of news. On this modern era like currently, many ways to get information are available for anyone. From media social including newspaper, magazines, science publication, encyclopedia, reference book, book and comic. You can add your understanding by that book. Are you ready to spend your spare time to open your book? Or just

searching for the Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) when you needed it?
