New to this edition you'll find:

- An enhanced section on imaging including recent advances in cardiac MRI and fetal echocardiography.
- New techniques in genetic testing for heart disease in special populations.
- Much more emphasis on the importance of echocardiography in understanding the pathophysiology of congenital cardiac malformations.
- Expanded section on cardiac conditions in the neonate, specifically on prenatal diagnosis and management, neonatal screening for congenital heart disease, and hypoplastic left heart syndrome.
- Expanded and updated congestive cardiac failure section, including the latest in genetic and metabolic causes of heart failure, and medical/surgical treatment options; discussion of bridging therapies; essentials of transplantation, including common drug treatment regimens, clinical recognition of treatment complications and rejection, outcomes, morbidity and survival.
